

## Assignment for Full Stack Developers

### Assignment

Implement a web application as described in “Application specification”-section, by using modern web technologies - (Laravel/ReactJS/NodeJS/ExpressJS/VueJS).

Only browser requirement is that the application is working on the latest version of Google Chrome.

Download the data for the assignment [here](#).

### Application Specification

User must be able to upload a JSON file (response.json) via form.

Uploaded data must be stored in a relational database. Recurring uploads must update existing database rows (instead of duplicating the data).

User must be able to search existing database rows by using a free text search box (See figure 1). Search must be on the same page as the upload form.

Search must be implemented as a “live” search, meaning that the search is listening for user input and the page doesn’t reload in between searches. Search results must be limited to 20.

### Appearance & Usability

Feel free to use any free theme or template. Has to be responsive enough to cover the following breakpoints:

- Mobile: 360 x 640.
- Tablet: 768 x 1024.
- Laptop: 1366 x 768.
- High-res laptop or desktop: 1920 x 1080.
